

1. A software company rewards employees who have **more than 5 years of experience** with a **20% performance bonus**. The company also wants to display the employee's total salary after adding the bonus.

Question

Write a Python program to:

- Read the employee's name, salary, and years of experience.
- If the employee has **more than 5 years of experience**, calculate the bonus and total salary.
- Display the employee's name, bonus, and total salary.
- In the last line of the code, print your name and register number.
